Picasso Lighting is committed to providing sustainable lighting products for life. Eventually all LED integral lighting fixtures fail...at Picasso Lighting we keep your profile in the ceiling (or bring it back to the factory) and replace all the drivers and LED boards when the original equipment fails. We are committed to proper end of life management of electronics containing components hazardous to our environment. We offer an integrated strategy that allows our customers to reduce the amount of waste produced. We implement best practices for handling waste on-site and provide a full range of treatment options to meet specific needs to have the least amount of impact on our earth. Each electronics processing facility we use has the distinct industry designation of being a R2/RIOS Certified Electronics Recycler.™ facility.
